MARKET INTELLIGENCE BRIEF

Rafiki Harvest Foods Export Market Prioritisation

Which export markets should we prioritise over the next 6 months — and how?

COMPANY	Rafiki Harvest Foods
PERIOD COVERED	Oct 2026 – Mar 2027 (6-month horizon)
DATA SOURCES	Internal CRM/ERP (Jan 2024 – Sep 2026) · UN COMTRADE · USDA GAIN/FAIRS · Rwanda NIS
MARKETS ASSESSED	Uganda · Rwanda · Tanzania · South Sudan · UAE · UK · DR Congo
PRODUCTS	Dried Fruit · Sauces & Condiments · Spices · Spreads · Flours & Cereals
OVERALL CONFIDENCE	Medium — small enquiry samples (8–26 per market); no external category-level market-size data
CLASSIFICATION	CONFIDENTIAL — Leadership use only

1. Research Brief Summary

Item	Detail
Objective	Identify 1–2 export markets for Rafiki Harvest Foods to prioritise over the next 6 months, and recommend competitive positioning in those markets.
Scope	6 product lines (Dried Fruit, Sauces & Condiments, Spices, Spreads, Flours & Cereals) across 7 pipeline markets (Uganda, Rwanda, Tanzania, South Sudan, UAE, UK, DR Congo). Timeframe: Oct 2026 – Mar 2027.
Constraints	Low budget; 85% utilisation ceiling (current average ~69%); 6-month horizon; no TBS/ Halal/Organic certifications held.
Success criteria	A ranked shortlist of 1–2 markets backed by evidence, with competitive positioning guidance, packaged as a leadership-ready brief.
Internal data	Jan 2024 – Sep 2026 (CRM/ERP: enquiries, orders, capacity, certifications, feedback).
External data	UN COMTRADE (2024–2025 vintage); USDA GAIN Reports – Uganda (Jun 2025), Rwanda (May 2025); USDA FAIRS Tanzania (Jan 2026); Rwanda NIS via UNDP (2025–Q1 2026).
Key assumption	"Low budget" means certification investments must be sequenced, not pursued in parallel.

2. Executive Summary

RECOMMENDATION

Prioritise Uganda and Rwanda for the Oct 2026 – Mar 2027 period. Uganda delivers the largest revenue base (KES 20.6M, 50% win rate); Rwanda offers the highest conversion rate (71.4%) and fastest payment (33.5 days). Tanzania holds significant pipeline (KES 4.0M) but is blocked by certification gaps — begin scoping only. Defer UAE and UK.

Key Insights at a Glance

ID	Insight	Key Figure	Confidence	Evidence
I1	Uganda is the strongest export market by volume, revenue and product breadth, but faces price and lead-time pressure from a competitor quoting 8–10% lower per carton.	11/22 enquiries won (50%); KES 20.6M revenue	Medium	Fig. 1; I1-E1–E4
I2	Rwanda has the highest win rate and most positive buyer feedback, with room to expand the product range through RSB registration.	5/7 won (71.4%); KES 7.8M revenue; 9.4% GDP growth 2025	Medium	Fig. 1; Fig. 3; I2-E1–E6
I3	Tanzania generated strong demand (18 enquiries, KES 4.0M pipeline) but is blocked by TBS certification and Swahili labelling gaps — 12 of 15 losses are compliance-driven.	1/16 decided enquiries won (6.3%); 8/15 losses cite TBS	Medium	Fig. 2; I3-E1–E5
I4	Spare production capacity (~30% headroom) exists to support export growth, but line-level bottlenecks caused 6,335 units of declined orders during peak months (Dec 2025–Mar 2026).	Avg utilisation 69%; 6,335 units declined	Medium	Fig. 4; I4-E1–E3
I5	UAE and UK are blocked by missing Halal and Organic certifications respectively — neither is achievable within 6 months on a low budget.	UAE 0/12 won; UK 0/8 won	Medium	Fig. 2; I5-E1–E4

Recommended Next Steps

1 **Review Uganda export pricing**

Insight I1 · Effort: Low · Owner: Commercial/Export Manager · Address the 8–10% price gap; assess logistics cost reduction options.

2 **Register remaining 3 products with RSB (Rwanda)**

Insight I2 · Effort: Low–Medium · Owner: Quality/Regulatory Manager · P003, P005, P006 not yet registered; buyers requesting larger carton sizes.

3 **Scope TBS certification for Tanzania**

Insight I3 · Effort: Low (scoping only) · Owner: Quality/Regulatory Manager · Confirm requirements, timeline and cost before committing budget.

4 **Map line-level capacity for off-peak export scheduling**

Insight I4 · Effort: Low · Owner: Production Manager · Use Apr–Aug headroom for export runs; build buffer stock before peak domestic months.

5 **Obtain Halal certification cost estimate (scoping)**

Insight I5 · Effort: Low · Owner: Quality/Regulatory Manager · Halal would also unlock markets beyond UAE; scope now, invest later.

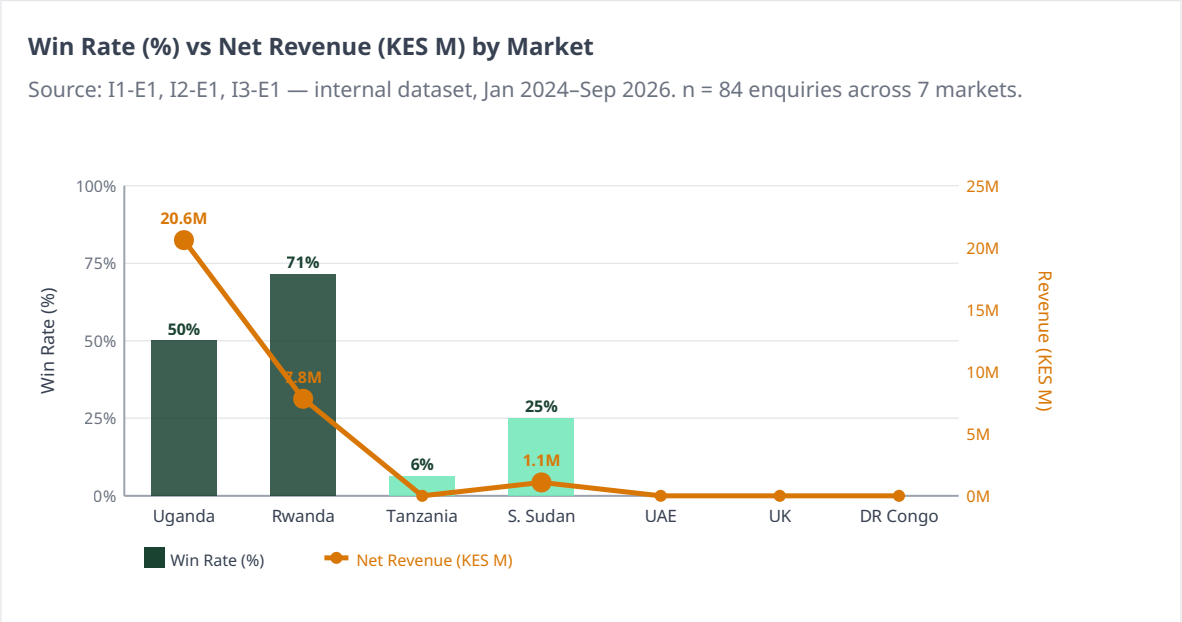

3. Detailed Insights

I1 Uganda — Strongest Export Market, but Price-Competitive

Summary: Uganda is Rafiki Harvest Foods' largest export market by every measure — revenue (KES 20.6M), enquiry volume (26), product breadth (all 5 export products sold), and absolute margin (KES 7.4M). However, 5 of 11 lost enquiries cite price, and buyer feedback repeatedly flags an alternative supplier quoting 8–10% lower per carton. Uganda was Kenya's top export destination in 2024, receiving 11.3% of all Kenyan exports.

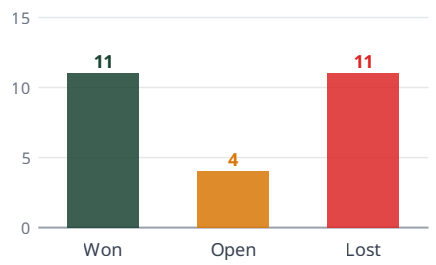

50.0%	KES 20.6M	35.9%	58.2 days
Win Rate (11 of 22 decided)	Net Revenue Jan 2024–Sep 2026	Gross Margin (KES 7.4M)	Avg Days to Pay

Figure 1: Export Market Scorecard — Win Rate vs Net Revenue

The chart shows Uganda leading on revenue while Rwanda leads on win rate. Tanzania, UAE, UK and DR Congo show zero revenue despite significant enquiry volumes — the barriers are structural (certification) or commercial (price/capacity).

Uganda: Enquiry Funnel (Won / Open / Lost)

Loss Reasons — Uganda (11 lost enquiries)

Loss Reason	Count	%
Price too high	5	45%
Delivery lead time too long	3	27%
Payment terms not acceptable	3	27%

> *"Alternative supplier quoting roughly 8–10% lower per carton." — Uganda buyer feedback*

> *"Brand is not yet well known; needs in-store promotion support." — Uganda buyer feedback*

Why This Matters: Uganda already generates 70% of export revenue and has the broadest product footprint. Protecting and growing this market is the highest-impact near-term move.

Limitations: Small sample (26 enquiries); no direct competitor pricing or quality data; the US$24.89M Kenya–Uganda edible preparations trade figure (I1-E5) covers all categories — context only.

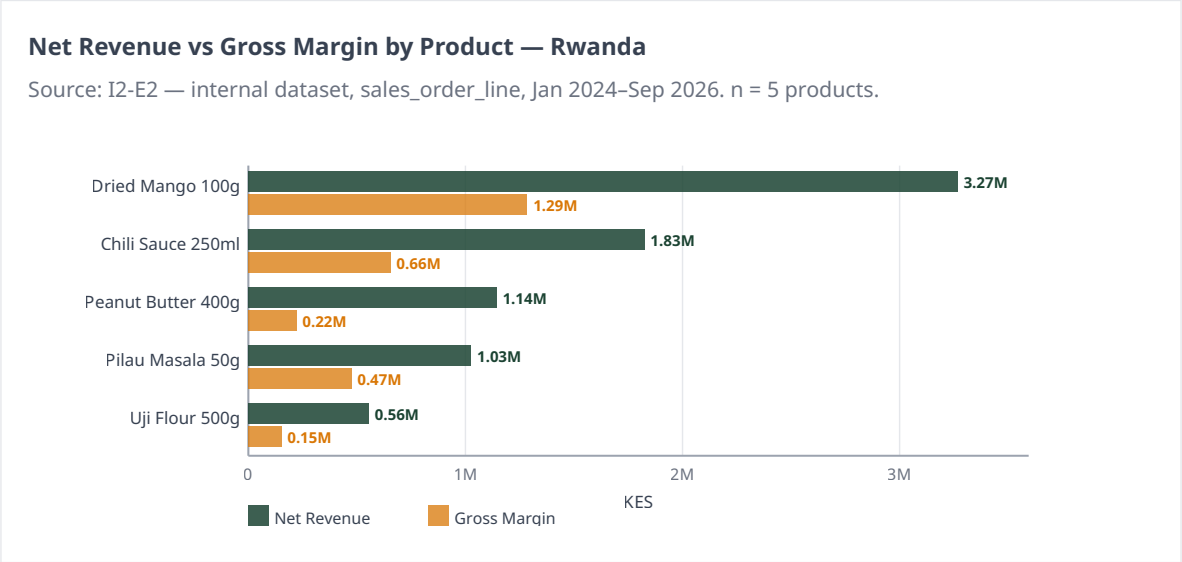

I2

Rwanda — Highest Win Rate, Most Positive Buyer Sentiment, Growth Economy

Summary: Rwanda has the highest enquiry conversion rate (5 of 7 decided, 71.4%) and is the only market with consistently positive buyer feedback ("strong repeat demand", "happy with delivery reliability"). Revenue is KES 7.8M across 5 products, with Dried Mango and Chili Sauce leading. Rwanda's economy grew 9.4% in 2025 and 10% in Q1 2026, with an expanding retail sector and growing demand for safe, high-quality food products. Only 3 of 6 products are currently RSB-registered, leaving room to expand.

71.4%	KES 7.8M	35.7%	33.5 days
Win Rate (5 of 7 decided)	Net Revenue Jan 2024–Sep 2026	Gross Margin (KES 2.8M)	Avg Days to Pay (vs 58.2 Uganda)

Figure 3: Rwanda — Net Revenue and Gross Margin by Product (KES)

Dried Mango leads revenue at KES 3.3M; Pilau Masala has the highest margin rate (~46%). Three products (P003, P005, P006) are not yet RSB-registered — the unregistered product gap represents an expansion opportunity at relatively low cost.

> *"Strong repeat demand for spice blend and chili sauce; asking for a larger carton size." — Rwanda buyer feedback*

> *"Happy with delivery reliability compared with other suppliers." — Rwanda buyer feedback*

Rwanda Certification Status

Product	RSB Registration	Expiry
P001 – Dried Mango 100g	✓ Held	Apr 2028
P002 – Chili Sauce 250ml	✓ Held	Apr 2028
P004 – Pilau Masala 50g	✓ Held	Apr 2028
P003 – Peanut Butter 400g	✗ Not registered	—
P005 – Uji Flour 500g	✗ Not registered	—
P006 – [6th product]	✗ Not registered	—

External Signals — Rwanda Economy

Signal	Source	Year
GDP growth: 9.4% in 2025; 10% in Q1 2026	Rwanda NIS via UNDP	2025–Q1 2026
Expanding retail sector; growing demand for safe, high-quality products	USDA GAIN Report – Rwanda	May 2025
Kenya exported US$2.12M of food preparations to Rwanda in 2025	UN COMTRADE via Trading Economics	2025

Why This Matters: Rwanda combines the highest conversion rate, fastest payment (33.5 days vs Uganda's 58.2), positive buyer sentiment, and a fast-growing economy — the lowest-friction export market in Rafiki's pipeline.

Limitations: Very small sample (8 enquiries); a 71.4% win rate from 7 decided enquiries could shift with a few more losses. RSB registration cost for remaining 3 products not yet costed or timed.

I3 Tanzania — Strong Demand Blocked by TBS Certification Gap

Summary: Tanzania generated the second-highest enquiry volume (18) and the second-largest pipeline value (KES 4.0M), but only 1 of 16 decided enquiries converted (6.3%). The dominant loss reasons are compliance-driven: 8 of 15 losses cite missing TBS certification and 4 cite labelling/language requirements (Swahili text, local importer details). TBS certification is currently "Not held" with no scope. Buyer feedback confirms: "Cannot clear products at the border without local standards certification."

6.3%	18	KES 4.0M	80%
Win Rate (1 of 16 decided)	Total Enquiries (2nd highest)	Pipeline Value (2 open enquiries)	Compliance-driven Loss Rate (12/15)

Figure 2: Loss Reasons by Market — Top 6 Markets by Lost Enquiries

Stacked Loss Reasons by Market

Source: I1-E3, I3-E2, I5-E1, I5-E3 — internal dataset, export_enquiry (Lost). n = 56 lost enquiries.

Tanzania's losses are overwhelmingly compliance-driven (12 of 15), unlike Uganda (price/commercial) or UAE (capacity/Halal). This means Tanzania's barrier is specific and potentially removable — unlike structural volume or budget constraints.

Tanzania Loss Breakdown

Loss Reason	Count	% of Lost	Action Required
TBS Certification not held	8	53%	Apply for TBS certification
Labelling / language (Swahili + importer)	4	27%	Redesign labels
Price too high	2	13%	Review pricing
No follow-up from buyer	1	7%	CRM follow-up

> *"Cannot clear products at the border without local standards certification." — Tanzania buyer feedback*

> *"Labels need Swahili text and local importer details." — Tanzania buyer feedback*

> *"Wants confirmation of local certification before placing a trial order." — Tanzania buyer feedback*

Decision Guidance: Begin TBS certification scoping only — confirm requirements, timeline and cost with TBS directly before committing budget. Tanzania is a *medium-term* market, not a 6-month priority. Do not assume that certification alone will recover the 15 lost enquiries; buyers may have moved on.

I4

Production Capacity Supports Export Growth, with Line-Level Constraints

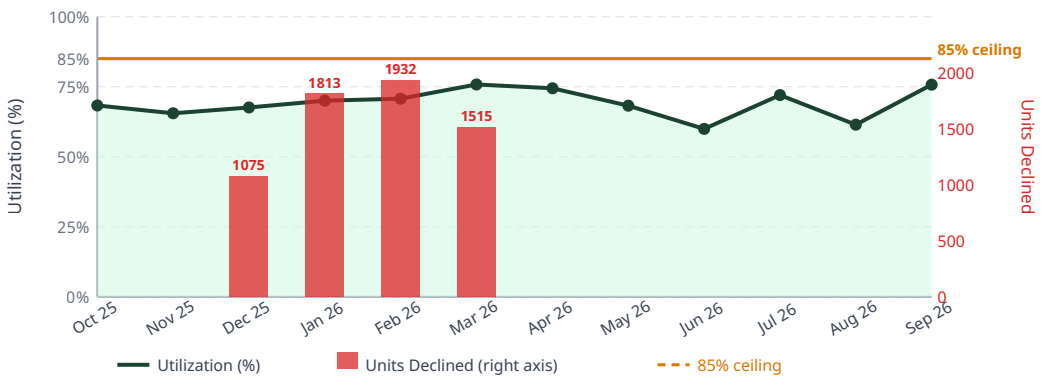

Summary: Average plant utilisation over the last 12 months is ~69% against a 119,500 units/month capacity ceiling, well below the 85% sustainable maximum. However, 6,335 units were declined during Dec 2025–Mar 2026 (peak domestic months), indicating line-level or SKU-mix bottlenecks even when aggregate utilisation was ~70–76%. Off-peak months (Apr–Aug) show utilisation of 59.9–74.4% with zero declined orders — this is the optimal export scheduling window.

~69%	119,500	6,335	~30%
Avg Utilisation (Oct 2025–Sep 2026)	Units/Month Total Capacity	Units Declined (Dec 25–Mar 26)	Average Headroom Below 85% Ceiling

Figure 4: Monthly Capacity Utilisation and Declined Orders (Oct 2025–Sep 2026)

Capacity Utilisation (%) and Declined Orders by Month

Source: I4-E1, I4-E2 — internal dataset, capacity records. 85% ceiling shown as reference dashed line.

Aggregate headroom (~30%) confirms that export growth is feasible without capital investment. However, line-level bottlenecks in peak domestic months (Dec–Mar) caused real order losses. Scheduling export runs in Apr–Aug avoids this risk and allows buffer stock build-up ahead of peak season.

Utilisation Summary — Off-Peak vs Peak

Period	Avg Utilisation	Units Declined	Export Scheduling Suitability
Oct–Nov 2025	~67%	0	✓ Suitable
Dec 2025–Mar 2026 (peak)	**~71–76%**	**6,335**	**✗ Line-level bottlenecks — avoid**
Apr–Aug 2026 (off-peak)	~60–74%	0	✓ Optimal export window
Sep 2026	~76%	0	✓ Suitable

Key Caveat: Aggregate headroom ≠ line-level capacity. The 6,335 declined units prove SKU-mix constraints exist within the aggregate. A line-level capacity map (by product) is needed before confirming export scheduling feasibility.

I5 UAE and UK Are Blocked by Certification Gaps — Defer Beyond 6 Months

Summary: UAE lost 12 of 12 decided enquiries: 5 cite capacity/volume constraints and 4 cite missing Halal certification. UK lost 8 of 8 decided enquiries: 4 cite missing Organic certification and 2 cite compliance documentation. Neither Halal nor Organic certification is held or in progress. On a low budget and 6-month horizon, these markets are not actionable — but both hold genuine future potential.

UAE — Loss Breakdown (12 lost enquiries)

Loss Reason	Count	%
Capacity / peak-season volume	5	42%
Halal certification not held	4	33%
Price too high	2	17%
Packaging / shelf-life requirements	1	8%

Pipeline: 2 open enquiries (value not disclosed). Win rate: 0/12.

UK — Loss Breakdown (8 lost enquiries)

Loss Reason	Count	%
Organic certification not held	4	50%
Minimum volume / compliance docs	2	25%
Logistics cost too high	1	13%
Price too high	1	13%

Pipeline: 1 open enquiry. Win rate: 0/8.

> *"Interested only if products carry organic certification." — UK buyer feedback*

Certification Gap Summary

Certification	Status	Market Unlocked	Within 6-Month Horizon?
RSB (Rwanda Standards Board)	✓ Held (3 of 6 products)	Rwanda	Yes — register remaining 3
TBS (Tanzania Bureau of Standards)	✗ Not held	Tanzania	Possibly — scope first
Halal	✗ Not held	UAE (+ others)	No — defer; scope cost
Organic	✗ Not held	UK	No — defer

> **Why "Defer" ≠ "Abandon":** UAE (KES 2.7M pipeline) and UK (KES 2.1M pipeline) represent real future demand. Halal certification, once obtained, unlocks UAE and other Muslim-majority markets simultaneously. Begin scoping now so the investment decision is informed.

4. Strategic Implications and Decision Guidance

Option	Insight	Decision It Informs	Key Constraint	Must Verify First	Key Risk	Confidence
Prioritise Uganda: defend and grow — Review export pricing; optimise logistics to reduce lead time; consider in-store promotion support.	I1	Whether to invest in price competitiveness vs brand-building in Uganda	Low budget; 6-month horizon	Competitor pricing and quality (currently unknown); actual logistics cost breakdown	Losing share to the 8–10% cheaper competitor if no action taken	Medium
Prioritise Rwanda: expand product range — Register remaining 3 products with RSB; introduce larger carton sizes per buyer request.	I2	Whether to register additional SKUs and adjust packaging	RSB registration cost and timeline; low budget	RSB registration requirements and fees for P003, P005, P006	Small market; registration cost may not be justified if volumes remain low	Medium
Begin TBS scoping for Tanzania (medium-term) — Confirm TBS requirements, timeline and cost; do not commit budget until scoping is complete.	I3	Whether to invest in TBS certification	Low budget; certification likely exceeds 6 months	TBS requirements, fees and processing time confirmed directly with TBS	Certification takes longer or costs more than expected; lost buyers may not return	Medium
Schedule export production in off-peak months — Use Apr–Aug headroom for Uganda/	I4	How to allocate production capacity to exports without disrupting domestic supply	Line-level constraints unknown	Which product lines have spare capacity in off-peak months	SKU-mix constraints may limit actual available export capacity	Medium

Option	Insight	Decision It Informs	Key Constraint	Must Verify First	Key Risk	Confidence
Rwanda export orders; build buffer stock.						
Defer UAE and UK — Park these markets; optionally begin Halal certification scoping as a medium-term investment.	I5	Whether to pursue UAE/UK within 6 months	Halal/ Organic certification not held; low budget	Halal certification cost and timeline	Pipeline enquiries may go cold if deferred too long	Medium

What would change this guidance:

- If a competitor exits Uganda or raises prices, Uganda price pressure eases — deepen with confidence.
- If TBS certification can be obtained in under 6 months at low cost, Tanzania moves from "medium-term" to "immediate priority."
- If Halal certification is faster and cheaper than expected, UAE could be activated sooner.

5. Recommended Next Steps

Five actions are recommended, sequenced by effort and urgency. All are achievable within the 6-month horizon unless noted.

#	Action	Insight	Effort	Owner Role	Horizon
1	**Review Uganda export pricing** — Benchmark against the competitor's 8–10% price gap; model the margin impact of a targeted price reduction or logistics optimisation.	I1	Low	Commercial / Export Manager	Within 6 months (immediate)
2	**Register remaining 3 products with RSB (Rwanda)** — Apply for RSB registration for P003 (Peanut Butter), P005 (Uji Flour) and P006. Simultaneously explore larger carton sizes as buyer-requested.	I2	Low–Medium	Quality / Regulatory Manager	Within 6 months
3	**Confirm TBS certification requirements with TBS directly** — Scoping only; confirm requirements, fees and processing time before committing budget. Do not proceed to application until scoping is complete.	I3	Low (scoping)	Quality / Regulatory Manager	Scoping within 6 months; application beyond
4	**Map line-level capacity by product for off-peak months (Apr–Aug)** — Identify which product lines have genuine spare capacity; use this to confirm feasibility of export scheduling without disrupting domestic orders.	I4	Low	Production Manager	Within 6 months (immediate)
5	**Obtain Halal certification cost estimate (scoping)** — Halal unlocks UAE and other Muslim-majority markets; scoping now informs the next investment cycle without requiring current-period spend.	I5	Low (scoping)	Quality / Regulatory Manager	Scoping within 6 months; investment beyond

6. Evaluation Summary

Insight	Confidence	Key Limitation	Key Risk
I1: Uganda — strongest market, price pressure	Medium	Small sample (26 enquiries); no direct competitor pricing data	Losing share to cheaper competitor if no pricing action taken
I2: Rwanda — highest win rate, growth economy	Medium	Very small sample (8 enquiries); RSB registration cost not yet confirmed	Market too small to justify investment if volumes remain low
I3: Tanzania — demand blocked by TBS gap	Medium	No external market-size data for Rafiki's categories; TBS cost/timeline unknown	Certification takes longer / costs more than expected; buyers may not return
I4: Capacity supports export growth	Medium	No line-level breakdown; SKU-mix constraints unknown at product level	Line-level bottlenecks limit actual available export capacity
I5: UAE/UK blocked by certification gaps	Medium	Halal/Organic certification cost and timeline not confirmed	Pipeline enquiries may go cold during the deferral period

Overall Reliability: Medium. All five insights are supported by first-party internal data and corroborated by external signals where available. The main limitations are small enquiry samples (8–26 per market), absence of external market-size data specific to Rafiki's product categories, and unknown certification costs and timelines. This brief is directionally reliable for prioritisation decisions but should be supplemented with direct market verification — buyer conversations, TBS/RSB enquiries — before committing budget.

8. Closing Executive Summary

BOTTOM LINE

Prioritise **Uganda** (defend and grow) and **Rwanda** (expand product range). Begin scoping for Tanzania. Defer UAE and UK.

1. This brief identifies which 1–2 export markets Rafiki Harvest Foods should prioritise over the next 6 months on a low budget, drawing on 26 months of internal CRM/ERP data (Jan 2024–Sep 2026) and four external data sources.

2. **Uganda and Rwanda are the two markets with proven conversion and revenue.** Tanzania shows strong demand (KES 4.0M pipeline, 18 enquiries) but is blocked by a compliance-specific certification gap (I1, I2, I3).

3. Uganda generated KES 20.6M in export revenue with an 11-of-22 win rate (50%). Rwanda converted 5 of 7 enquiries at 71.4% — the highest win rate in the pipeline — with the most positive buyer feedback and the fastest payment cycle (33.5 days vs 58.2 for Uganda). (I1-E1, I1-E2, I2-E1, I2-E4)

4. Defending Uganda against a price-competitive rival (8–10% gap) and expanding Rwanda's registered product range (3 of 6 products currently RSB-registered) are the highest-return actions within current budget constraints.

5. The recommended path is to review Uganda export pricing and register remaining RSB products in Rwanda (I1, I2), while scoping TBS certification for Tanzania as a medium-term play (I3). Approximately 30% average capacity headroom (Apr–Aug 2026) confirms these plans are manufacturable without capital investment (I4).

6. **Overall confidence is Medium**, limited by small enquiry samples (8–26 per market) and no external market-size data specific to Rafiki's product categories. The brief is directionally reliable for prioritisation but should be supplemented with direct buyer conversations and regulatory enquiries before committing budget.

7. This brief does not confirm that the Ugandan price gap is insurmountable or that TBS certification alone would convert Tanzania's lost enquiries — both require direct verification with buyers and the relevant regulatory bodies.

Prepared for internal leadership use only. Data sourced from Rafiki Harvest Foods' internal CRM/ERP system (Jan 2024–Sep 2026) and publicly available external sources (UN COMTRADE, USDA GAIN/FAIRS, Rwanda NIS/UNDP). All figures are point-in-time estimates and should be refreshed before the next planning cycle. **Confidential — do not distribute externally.**
